beyerdynamic – Opus 600 wireless microphone system

Some products just do the job in a nice,
unflashy way – and beyerdynamic's Opus 600
wireless microphone system is one of them. It's
simple to set up, simple to operate and good
value for money.

Key features include interchangeable mic
capsules to suit the application, and battery life
of more than 20 hours. There's a choice
between the single-channel NE600S and dual-
channel NE600D receivers. There are 16
programmed UHF frequencies available; these
can be selected (via Autoscan) and switched
easily. There's also the S600 handheld
transmitter, with simple infrared setup.

The system comes in five pre-configured
receiver/transmitter/mic sets. It's aimed at
audio and AV installations – including theatres,
sports halls, hotels and universities – as well as
the touring market.

Equipson – Work IC 6 Pro A ceiling speaker

What can be new about ceiling speakers?
Actually quite a lot, if you're talking about the
WORK IC 6 Pro A from Equipson. First, it
contains an internal 40W class D amplifier, to
give a high output level from a small form
factor. But what's more intriguing is that it can
be volume-controlled, and switched on and off,
via DMX – so up to 512 of them can be
individually controlled, along with the lighting,
in a DMX universe via a single controller. This
opens up a number of possibilities – such as
linking the speakers with a presence detection
system and putting them into standby mode
(and saving energy) if no movement is detected.
